

DE ANTIBETES

Capsule

DE Antibetes Combats diabetes

The natural ingredients increase insulin secretion in the body by reducing the glycated hemoglobin level (form of hemoglobin used to measure glucose content in the blood) normalizing micro albuminuria (a condition which is an important prognostic marker for kidney disease in diabetes mellitus) modulating the lipid profile, minimizes long-term diabetic complications.

The drug also increases hepatic and muscle glycogen content, which enhances the peripheral utilization of glucose.

Indications:

- *DE Antibetes is For non-insulin-dependent diabetes mellitus (NIDDM/type II), as a monotherapy or as an adjuvant to other oral antidiabetic drugs*
- *DE Antibetes is For NIDDM with signs and symptoms of hyperlipidemia*
- *DE Antibetes is For NIDDM with early retinopathy DE Antibetes is For NIDDM with micro albuminuria*
